

Amendments to Abstract:

ABSTRACT

The present invention relates to a method for analyzing a liquid sample by injection of the latter into a reaction loop coupled with illumination means and detection means, which comprises the following steps:

- filling a reaction loop (42) with a minimum volume of the sample to be analyzed, this reaction loop forming a transparent pipe with which detection means are coupled,
- injecting a fixed volume of at least one reagent into the reaction loop (42),
- detecting levels of filtered light by these detection means (41),
- discharging reagents located in the reaction loop (42).

The present invention also relates to a system for analyzing a liquid sample.

ABSTRACT

The present invention relates to a method for analyzing a liquid sample by injection of the latter into a reaction loop coupled with illumination means and detection means, which comprises the following steps:

- filling a reaction loop with a minimum volume of the sample to be analyzed, this reaction loop forming a transparent pipe with which detection means are coupled,
- injecting a fixed volume of at least one reagent into the reaction loop,
- detecting levels of filtered light by these detection means,
- discharging reagents located in the reaction loop..

The present invention also relates to a system for analyzing a liquid sample.
